The EWB SVCE Student Chapter conducted an engaging technical event titled “**Trust the Process**” as a part of **Highways’26** on **9th April 2026**. The event was organized with the objective of testing participants’ communication, interpretation, teamwork, creativity, and execution skills through a unique multi-stage challenge. Conducted at **CB522**, the event attracted enthusiastic participation from students interested in innovation and technical problem-solving.

Event Flow

- Participants competed in teams consisting of **3 members**.
- The event began at 11:00 A.M., where each team was provided with a mystery object or concept.
- The challenge was divided into three interconnected stages:
 1. The **first member** identified a mystery object or concept based on clues provided by the organizers and verbally communicated its exact name to the second member.
 2. The **second member**, while wearing headphones, had to carefully interpret what the first member was saying and then explain the step-by-step process of recreating the object to the third member without directly naming it.
 3. The **third member** followed the instructions provided to replicate the object on a tablet and ultimately identify the final diagram or concept represented.
- The difficulty and nature of the mystery objects varied according to the respective engineering domains, making the competition both technically challenging and creative.

Event Highlights

The event successfully combined elements of technical knowledge, imagination, and teamwork. Participants demonstrated strong communication and analytical skills while working under time constraints. The challenge encouraged students to think critically, interpret ideas accurately, and transform concepts into visual representations.

A total prize pool of **₹2000**, along with gift vouchers, was awarded to the top-performing teams. Winners were determined based on their ability to successfully identify and recreate the correct object or concept in the shortest amount of time.

The lively participation and competitive spirit created an energetic and interactive atmosphere throughout the session. Students actively collaborated within their teams, making the event both intellectually stimulating and enjoyable.

Conclusion

“Trust the Process” proved to be a highly engaging and innovative semi - technical event that effectively promoted teamwork, communication, and creative problem-solving among participants. By integrating interpretation-based challenges with technical execution, the event provided students with a unique learning experience beyond conventional competitions. The successful conduct of the event reflected the enthusiasm and collaborative spirit of both the organizers and participants, making it one of the memorable highlights of Highways’26.

Feedback from Participants

Feedback collected from the participants indicated that the event was highly engaging, interactive, and well-received overall. A majority of the students particularly enjoyed the communication-based challenges involved in identifying and recreating the mystery objects. Many participants highlighted the second stage of the event, where one member interpreted words while wearing headphones and guided another teammate through the drawing process as the most interesting and entertaining aspect of the competition. Responses such as “Everything,” “All are interesting,” and “Trust the Process” reflected the participants’ overall satisfaction and enjoyment throughout the event. Several students also appreciated the balance of fun and challenge, mentioning that finding clues and understanding the process required critical thinking and teamwork while still being enjoyable.

The feedback analysis further showed that approximately **90.9% of the participants found the event interactive and fun**, demonstrating the success of the event in maintaining active student engagement. Participants appreciated the unique format of the game, which encouraged communication, coordination, creativity, and quick interpretation skills.

Suggestions provided for future improvements were minimal, indicating a generally positive response toward the organization and execution of the event. While many participants responded with comments such as “Nothing,” “Nope,” and “All are good”, a few constructive suggestions included increasing the allotted time, incorporating more interactive or entertaining elements, and introducing slightly more varied or challenging words and clues. These responses suggest that the event was effectively organized while also providing useful insights for enhancing participant experience in future editions.
