THINK TANK THURSDAY

Event Report

20th April 2026

The *Think Tank Thursday – Carbon Challenge*, was successfully conducted with the objective of encouraging students to develop practical and sustainable solutions for reducing carbon footprints in everyday life. The event was held from 10:30 A.M. to 12:00 P.M. at the *Quality Management Centre, 2nd Floor, Mechanical Department*, and witnessed enthusiastic participation from students across various departments.

The session commenced with a brief introduction to the concept of *Think Tank Thursday* and its aim of promoting collaborative problem-solving and innovative thinking among students. Participants were then divided into teams consisting of 2-4 members and were introduced to the theme of the event, “*Think. Redesign. Sustain.*”

Each team was assigned a real-world character profile such as a college student, IT employee, homemaker, delivery partner, factory worker, farmer, or campus management team. The teams were challenged to redesign the daily routine of their assigned character in a manner that would reduce their carbon footprint while remaining practical and realistic.

To make the activity more engaging and closer to real-life scenarios, every team was also provided with a unique constraint or “twist,” including factors such as budget limitations, power cuts, uncooperative roommates, lack of technological access, and restricted investments. Participants were required to create solutions while effectively working within these constraints.

During the design phase, teams brainstormed ideas related to sustainable transportation, energy conservation, food consumption, waste management, water conservation, and eco-friendly lifestyle changes. The activity encouraged participants to think critically, within the allotted time, about balancing sustainability with practicality and affordability.

Following the brainstorming session, each team presented their redesigned routines and explained the reasoning behind their solutions. The presentations showcased a wide range of innovative and feasible ideas, including the use of public transportation and carpooling, reduction of food waste, energy-efficient practices, reusable products, water-saving methods, and sustainable campus initiatives.

The teams were evaluated based on the following judging criteria:

- Creativity of ideas
- Practicality and feasibility
- Sustainability impact

The event concluded with the announcement of results, where the *Winner*, *Runner-Up*, and *Special Mention* teams were recognized for their commendable performances. In addition, the winner of the previously conducted **Think Out Loud** event was also felicitated with a memento in appreciation of their achievement.

The event successfully created an interactive platform for students to engage in meaningful discussions on sustainability and environmental responsibility. The enthusiastic participation and innovative solutions presented by the teams reflected the growing awareness and interest among students toward sustainable living and climate-conscious decision-making.

Feedback from Participants

What part of the event did you find most engaging or interesting?

2 responses

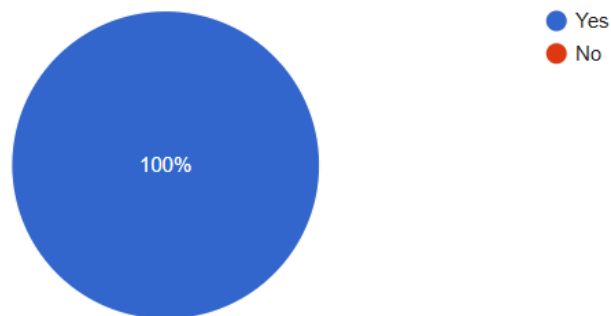

The problem statements and the time limit made us think faster

Talking about the topic, limitation and the role of the person.

Do you feel motivated to adopt sustainable practices after this event?

 [Copy chart](#)

2 responses

What improvements would you suggest for future events?

2 responses

More difficult problem statements and more clear about what we should tell, like a technical solution or a normal day to day life solution

I will be glad if more students enroll and this event should be known to all. One of my friend told me and then only I came to know. Otherwise, I don't know whether this events exists or not
